4 Outcome Indicators

4.1 Progress Rates

The progress rates for nurses is defined as:

$$\text{PR} = \text{Sum of passed student load} / \text{Sum of certified student load}$$

where certified student load = EFTSU for records whether student completed, failed or withdrawn from a unit of study

4.2 Retention Rates

Retention rate is one way to show the ability of institution to retain their students who represents one dimension of the effectiveness of the delivery of education services. Normally, retention rate excludes those students who complete their courses but includes students who transfer to another course within the institution. Two retention rates are presented here.

PR1 = Nursing students enrolled in year $n + 1$ who were also enrolled in nursing in year n divided by (Nursing students enrolled in year n - completions in year n)

PR2 = Nursing students enrolled in year $n + 1$ who were also enrolled in year n (included transfer to another course) divided by (Nursing students enrolled in year n - completions in year n)

Note:

Higher Degree – Coursework includes:

Doctorate by coursework and Master’s by coursework;

Other Postgraduate includes:

Postgraduate Qualifying or Preliminary (for Master’s, Doctorate or Higher Doctorate), Graduate Diploma/Postgraduate Diploma (pass or honours) involving new academic, professional or vocational area, Graduate Diploma/Postgraduate Diploma (pass or honours) extending skills and knowledge in a professional area previously studies and Graduate Certificate;

Other Undergraduate includes:

Associate degree, Advanced Diploma (AQF terminology)/Diploma (pre-AQF terminology), Diploma (AQF terminology)/ Associate Diploma (pre-AQF terminology) and Other award course.

5 1992 Student Cohort¹

¹ The 1992 commencing students cohort database is derived from information supplied to the Department of Education, Training and Youth Affairs by publicly funded universities as part of the Higher Education Statistics Collection. Only non-overseas students who commenced between January and March 1992 are included in the sample.

5.1 Completion Rates for Nurses

Using the 1992 commencing student cohort three logistic regressions were run to predict the probability of completion of undergraduate, postgraduate coursework and postgraduate research nursing students.

Undergraduate

Other things being equal, nursing students are more likely to complete their studies than other Science students (with the exception of Veterinary Science and other Health students) and Art students. The probability of nursing students completing is almost 12 percentage points higher than the probability of an average student completing an award (See Table 7).

The number of undergraduate students who commenced a nursing course and completed an award other than nursing is not high, around 2 per cent (See Table 10).

Postgraduate Coursework

Compared to students from other disciplines, postgraduate coursework students, other than Masters students, are most likely to complete their courses. In contrast, Masters coursework students are least likely to complete, with a predicted probability of almost 11 percentage points lower than that of an average student (Table 8).

This group has the highest number of students (around 12%) who commenced a nursing course and completed an award other than nursing (Table 4).

Postgraduate Research

Like their counterparts in coursework, Masters by research students are not doing as well as students from other disciplines. Doctoral students, on the other hand, are more likely to complete. Caution is, however, needed in interpreting these results due to the small cell size in nursing in the postgraduate research sample.

Around 5 per cent of the postgraduate research students who commenced a nursing course completed an award other than nursing (Table 4).
